

Pour-Over Technique

Date: 03/08/2018

Supplies Needed:

1. 16oz of water
2. Pour-over coffee dripper
3. 2 tablespoons of your favorite ground coffee
4. Coffee filter
5. Your favorite coffee mug

Method:

1. Boil 16oz of water
2. Place pour-over coffee dripper on top of mug with empty filter
3. Rinse filter with about 2oz of the boiling water to remove paper dust and to preheat the pour-over coffee dripper
4. Pour out water from the mug used to rinse the filter
5. Place coffee grounds in the dampened filter and place dripper back on top of mug
6. Slowly pour just enough hot water (in a circular motion) to saturate all of the grounds
7. Wait about 30 seconds, let the coffee bubble and soften.
8. Pour in more hot water, raising the water level such that it covers the grounds. Wait a few seconds until the water trickles through the dripper
9. Repeat the above step (pulse pouring) until you have your desired amount of brewed coffee and enjoy!
